bejaia, alger

@ladraniamine

AMINE LADRANI

0675369373

## PROFESSIONAL PROFILE

I'm amine Ladrani front end web developer I work on react framework and I use redux for state management system I learned some libraries like bootstrap, tailwind CSS, jquery, and some languages like HTML, CSS, and JavaScript my dream is to be a software engineer one day and I aspire to get an internship or a job

## PROJECTS

### Ideathon project

- My task was to work on the about us section and make it responsive but I noticed some errors in the counter and I rebuilt it because there was a problem, which is that whenever the counter reaches zero, it completes its calculation below zero
- I worked on animation when you scroll your page using the library of AOS.js
- I was the member of the month because I was the member who was the most asking and trying to understand where I learned tailwind CSS, git, and GitHub
- code ( <https://github.com/MehidGN/ideathon-estin> )
- live ( <https://bytecraft-ideatech.web.app/> )

### shopping card project

- I don't really care about the UI in this project because I try to focus more on the logic I build it with react, redux, and JSON server the idea of this project is I have products cards and many users each user has a shopping card you can make login and registration and if the username or the email exists in my database you will get a response from the server that tells you this username or this email is already exist
- It was hard at first when I try to handle all my data and make changes in this data because I was working with redux using reducer and initial-State then I discovered something great in the toolkit which is redux-thunk as it made me move between data better and smoothly
- At the moment the logic is done but it's not completely finished, I will try to work on the performance more and implement the clean code
- code ( <https://github.com/ladraniamine/shopping-card> )

### games platform project

- The project is a gaming platform where you can download compressed games with only 1 MB
- I use in this project HTML CSS pure javascript, bootstrap 5, and sass
- I focused more on how to make pagination using an array of objects and javascript
- code ( <https://github.com/ladraniamine/platform-games> )
- live ( <https://ladraniamine.github.io/platform-games/> )

## SKILLS

HTML5 CSS3 JavaScript react js  
redux js bootstrap tailwind CSS  
sass git & GitHub

## EDUCATION

BC. statistics & data informatics

Bejaia University

Sept 2020

## SOFT SKILLS

Learning potential Team work  
Flexibility

## CERTIFICATES

- Winning certificate for classing 3rd place in ideatech#2 an event that took place in ESTIN
- Certificate for participating in AIESEC project DZAIR school summer edition
- Certificate for participating in global summer school concerning the theme of good health and wellbeing

## LANGUAGES

Kabyle  
Arabic  
English  
French
